

# WSCB PROTOCOL FOR INJURIES IN NON-MOBILE CHILDREN

## Health Professional Management of Suspected Birth Mark

Professional observes a skin lesion/mark which they suspect is a birth mark.

Examples are:

- Stork Mark
- Mongolian Blue Spot
- Haemangioma

Has the skin lesion/mark been documented in any of the following:

- Child's Red Book
- Patient held Midwifery Record

YES

Has it been recorded as a birth mark?

Do you agree with this clinical judgement?

YES

Document in red book and patient record:

- Description of lesion
- Location of lesion
- Consideration of WSCB Injuries in Non-Mobile Children Protocol and why discounted

NO

Practitioner feels confident that skin lesion is a birth mark

After discussion with GP, decision that skin lesion is consistent with birth mark

NO

Practitioner uncertain regarding nature of skin lesion/mark

Contact child's GP urgently to discuss whether to follow WSCB protocol or arrange GP to review the same day.

After discussion with GP, appointment made for child to be seen by GP within same day.

**IF IN ANY DOUBT CONTACT YOUR AGENCY'S SAFEGUARDING TEAM FOR ADVICE**
